

Marco Polo Tower, Hamburg

Product: CeraLine shower channel

Project: Marco Polo Residential Tower
Location: HafenCity, Hamburg, Germany
Architects: Behnisch Stuttgart
Year: 2010

Hamburg's urban regeneration project 'HafenCity' aims to create an entirely redeveloped urban district sandwiched between the historic district 'Speicherstadt' and the river Elbe by 2025. The extravagant Marco Polo Tower has already been completed: The spectacular shape of this 55m, 17 storey high building resembles a modern sculpture, rather than a residential complex. Soft and round shapes, virtually no right angles, large windows and wraparound balconies on every floor - simply the best location, offering exciting panorama views across the Elbe and the city centre. On the inside, the 58 exclusive residential units feature individually designed bathrooms which are largely equipped with CeraLine by Dallmer.
