

Trilux Lighting, Arnsberg

Product: SuperDrain siphonic roof drainage

Project: Trilux distribution centre

Location: Arnsberg, Germany

Year: 2008

Trilux is a leading manufacturer of professional interior and exterior lighting systems. The company was founded in 1912 and now employs approx. 5,500 staff worldwide. In 2008, it opened its new European Distribution Centre (EDC) at its headquarters in Arnsberg. Trilux relies on SuperDrain siphonic drainage by Dallmer for the roof drainage of its new hall. SuperDrain roof drains can be fitted to all usual vapour barriers and roofing membranes: modified bitumen, PE film, FPO-PP and PVC roofing membranes. The 'loose/fixed flange'-model is used to connect all other membranes. SuperDrain can also be used to realise overflow drainage systems and meet fire protection requirements for trapezoidal steel sheet roofing.
