

Detached house, Bad Godesberg, Master bathroom

Lots of light and open architecture were top priority during the modernisation of this old house in the district of Bad Godesberg. For this purpose, the detached house, which was built in 1900 and is only five metres wide, needed to be completely structurally restored and professionally restructured. In particular, the developers wanted to create a large bathroom with natural light. After the complete restoration, the 12 m² bathroom was modern yet cosy. The master bathroom was sympathetically restored to harmonise with the rest of the house and finished with a combination of grey tones and oak. The CeraFloor Select shower channel perfectly matches the floor tiles and the wall colour. Together with all the other measures undertaken, the exclusive shower drain made of solid stainless steel served to considerably increase the residential value of the property.

Product: Shower channel CeraFloor Select

Project: Detached house
 Location: Bad Godesberg, Germany
 Architecture: VSBL, Belgrad/Bonn
 Year: 2016
