

Dallmer Logistics Centre Arnsberg

Products: SuperDrain roof drains,
emergency drainage system

Project: Dallmer Logistics Centre
Location: Arnsberg, Germany
Architecture: Erich Wellie
Year: 2015

As an innovative manufacturer of drainage systems, Dallmer has enjoyed great success for many years. The well-designed and proven products from Dallmer have also driven the increasing popularity and prevalence of level-access showers. The growth of the market and the company created the need for additional storage space. The newly built dispatch centre offers impressive logistics and a consistent industrial architecture. The integral roof drainage was designed and implemented in collaboration with the architects, the TGA planners, the workshop and the product consultants. The roof drains and emergency drainage system were selected from the „SuperDrain“ range. This proven siphonic drainage system is compatible with pipe systems from a range of manufacturers.
