

# SU House, Stuttgart

SU House is a representative urban villa in Stuttgart, designed and planned by Alexander Brenner Architects. The white, geometric building type is succinctly staged: Depending on the location, different concrete slabs, glass surfaces and roofs provide a vast range of experiences. Similar to various other Brenner projects, the solid construction of this concrete and brickwork building has been planned holistically, considering the structural engineering, interior works, garden landscaping and furnishings. The design and furnishings reflect both continuity and a willingness to experiment. The level-access showers have been fitted with CeraLine shower channels. Their clear linearity and sophisticated surfaces facilitate perfect integration into room designs while highlighting their significance.

Product: CeraLine shower channel

Project: SU House

Location: Stuttgart, Germany

Architect: Alexander Brenner Architects

Year: 2012
