Products: Floor drain body 61 GA , grating RHS 15,
fire and sound-insulating collar - installation kit 1

Project: Medical Centre

Location: Hannover, Germany

Architecture: Sander Hofrichter Architekten (alsh),

Year: 2014

The KRH Siloah Medical Centre in Oststadt-Heidehaus is located in the centre of Hanover. It was established after the merger of the previously independent traditional medical centres Siloah and Heidehaus. The Hanover Region Medical Centre (KRH) is a Group that currently comprises ten centres and, with 8500 employees, is one of the three largest municipal hospital companies in Germany. With almost 600 beds and nine operating theatres, the new construction of the Siloah complex has created the biggest and most modern hospital of the KRH. In terms of sanitation fixtures, the Group opted for 61 GA floor drains from Dallmer, which were fitted with anti-slip gratings, as well as fire and noise protection elements.
